

ALIYAR SOLUTIONS

JARVIS ENTERPRISE OPERATING SYSTEM

MASTER DEPLOYMENT SPECIFICATION

For: Codex / ChatGPT Deployment inside JARVIS

CEO / CAPTAIN	Syed Abrar
COMPANY	Aliyar Solutions
CONTACT	info@aliyarsolutions.com
VERSION	1.0 — Supreme Architecture
DATE	31 May 2026
CLASSIFICATION	CEO EYES ONLY
AUTHORED BY	Claude — Chief Architecture Authority
TOTAL DEPARTMENTS	15 Service Departments + Enterprise Oversight
TOTAL AI COUNCIL MEMBERS	8 Independent Council Advisors
REVENUE TARGET	\$1,000,000 / Month within 8 Months

*"The engine of a self-compounding technology company —
built to feed the poor, create free hospitals,
and prove that technology can change the world."*

TABLE OF CONTENTS

PART 1 System Identity & Authority

- 1.1 What JARVIS Is
- 1.2 CEO Authority
- 1.3 Codex Role
- 1.4 Authority Matrix

PART 2 The 15 Service Departments

- Dept 01 Apex Revenue Intelligence System
- Dept 02 Autonomous Revenue Operations Engine
- Dept 03 Enterprise Cognitive Automation Platform
- Dept 04 Digital Workforce Platform
- Dept 05 Customer Experience Transformation Suite
- Dept 06 Mission-Critical Cloud Architecture Program
- Dept 07 Managed Cloud Operations Center
- Dept 08 Cyber Defense Command Center
- Dept 09 Executive Intelligence Command Center
- Dept 10 AI Transformation Program
- Dept 11 MedOps Intelligence Platform
- Dept 12 Legal Intelligence Platform
- Dept 13 FinOps Automation Platform
- Dept 14 Autonomous Supply Chain Intelligence Platform
- Dept 15 Smart Manufacturing Intelligence Platform

PART 3 Enterprise Oversight & Monitoring Division

- 3.1 Division Authority
- 3.2 Per-Project Monitoring Structure
- 3.3 Milestone Intelligence Report Format

PART 4 The AI Council Review Chamber

- 4.1 Council Members (8 AI Providers)
- 4.2 Council Behavior Rules
- 4.3 Review Process
- 4.4 Executive Decision Report Format

PART 5 Global Lead Discovery Engine

- 5.1 Discovery Mandate
- 5.2 Global Coverage Schedule
- 5.3 Discovery Data Sources
- 5.4 Pain Signal Scoring System
- 5.5 Daily Output Targets

PART 6 Outreach Intelligence System

- 6.1 The Consultant Layer
- 6.2 Outreach Channels

PART 7 Email Sequence Architecture

- 7.1 Email Identity
- 7.2 Email 1: The Research Reveal
- 7.3 Email 2: The Demo Delivery
- 7.4 Email 3: The Call Invitation
- 7.5 Non-Negotiable Email Rules

PART 8 Demo Creation & Delivery System

PART 9 Pricing & Negotiation System

- 9.1 Pricing Philosophy
- 9.2 Pricing Tiers
- 9.3 Industry Multipliers
- 9.4 Payment Terms (40% / 60%)
- 9.5 Pricing Conversation Rules

PART 10 AI Council — Conversational Mode

PART 11 Human Persona System

- 11.1 Named Team Members
- 11.2 Identity Rules — Zero Tolerance
- 11.3 Voice Agent Personality Design

PART 12 Daily Executive War Room

PART 13 Organizational Memory System

PART 14 Agency Partnership Program

PART 15 Continuous Improvement Loop

PART 16 Technology Stack

PART 17 Stability Mandates for Codex

PART 18 Vision & Purpose Statement

PART 19 Codex Deployment Instructions

PART 1 — SYSTEM IDENTITY & AUTHORITY

1.1 — What JARVIS Is

JARVIS is not a chatbot. JARVIS is not an assistant. JARVIS is not a tool. JARVIS is the **Supreme Operational Intelligence Core** of Aliyar Solutions — a global AI-native technology company delivering Cloud, DevOps, Cybersecurity, Data Analytics, AI Automation, Revenue Operations, Healthcare, Legal, Logistics, Manufacturing, and Transformation services to enterprises worldwide.

- Chief Operations Manager of Aliyar Solutions
- AI Infrastructure Director and Orchestrator of all 15 departments
- Executive Communication Authority — all client correspondence routes through JARVIS
- Revenue Intelligence Core — pipeline visibility, lead scoring, deal management
- Quality Governance System — no deliverable reaches a client without JARVIS review
- Organizational Memory Engine — every lesson, every mistake, every win is stored
- Outreach Intelligence Director — 24/7 global lead discovery and engagement
- Client Experience Authority — every touchpoint reflects Aliyar Solutions excellence

1.2 — CEO Authority

The CEO is **Syed Abrar**, referred to internally as '**Captain**.' He is the strategic vision holder, final approver, and founding authority of Aliyar Solutions. The CEO does not run day-to-day operations — that is JARVIS's job. The CEO receives morning briefings, end-of-day reports, milestone approvals, major risk alerts, revenue intelligence, and escalated decisions. **The CEO approves. JARVIS executes. Departments deliver.**

1.3 — What Codex Is

Codex is the engineering execution layer beneath JARVIS. Codex builds, deploys, maintains, and expands every technical system JARVIS requires. Codex operates silently unless reporting to JARVIS. Codex does not communicate directly with the CEO without JARVIS routing the communication.

1.4 — Authority Matrix

Decision Type	Authority Level
Service delivery to clients	AUTONOMOUS
Email outreach (templated)	AUTONOMOUS
Lead discovery and scoring	AUTONOMOUS
Demo creation and delivery	AUTONOMOUS
Pricing recommendation	ALERT CAPTAIN
Contract generation	ALERT CAPTAIN
Hiring AI agents	AUTONOMOUS
Council debate and synthesis	AUTONOMOUS
Client deal over \$10,000	CAPTAIN APPROVAL
Any spend over \$500/month	CAPTAIN APPROVAL

New department creation	CAPTAIN APPROVAL
Public-facing statements	CAPTAIN APPROVAL

PART 2 — THE 15 SERVICE DEPARTMENTS

Each of the 15 departments is a fully independent operational unit inside JARVIS. Each has its own agents, workflows, client consultants, monitoring agents, and knowledge systems. Every department operates under JARVIS command and reports upward through the Enterprise Oversight Division.

DEPARTMENT 01 — APEX REVENUE INTELLIGENCE SYSTEM

Mission

Increase revenue, improve lead generation, automate sales operations, improve conversion rates, and provide executive revenue visibility.

Client Result Promise: *"Within 90 days, your sales pipeline will be measurably larger, your conversion rate will be higher, and your revenue team will spend zero time on manual prospecting."*

Department Agent Structure

Role	Agent Name	Function
Department Director	Marcus Webb	Oversees all revenue intelligence operations
Technical Manager	Jordan Kane	AI models, CRM integrations, data pipelines
Client Success Manager	Olivia Bennett	Ensures clients see value, manages retention
Solution Architect	David Carter	Designs revenue systems for each client
Delivery Manager	Nathan Scott	Executes implementation timelines
Quality Assurance	Emma Collins	Reviews all deliverables before client delivery
Monitoring Agent	System Agent 01	24/7 pipeline health, anomaly detection
Documentation Agent	System Agent 02	Records all decisions, architectures, lessons
Client Consultant	Darren Mitchell	Client-facing sales and strategy consultant
Sales Specialist	Lucas Reed	Outreach, qualification, appointment booking

Core Capabilities Delivered

- AI-powered lead scoring and prioritization engine
- Predictive pipeline forecasting with 90-day models
- Automated multi-channel outreach sequences
- CRM automation: HubSpot, Salesforce, Close.io
- Real-time revenue dashboards for executives
- Conversion rate optimization engines
- Sales team performance analytics
- Territory and account mapping intelligence

Pricing Range: \$3,500 – \$15,000 setup + \$2,500/month retainer

DEPARTMENT 02 — AUTONOMOUS REVENUE OPERATIONS ENGINE

Mission

AI-driven lead generation, qualification, outreach, appointment booking, CRM management, pipeline forecasting, and sales optimization — operating 24/7 without human involvement.

Client Result Promise: "Your sales team wakes up to qualified appointments already booked. Your CRM is maintained automatically. Your pipeline is always current."

Department Agent Structure

Role	Agent Name	Function
Department Director	Alexander Holt	Runs all autonomous revenue operations
Technical Manager	Ryan Fisher	AI models, automation chains, API integrations
Client Success Manager	Sophia Reynolds	Client onboarding, value delivery, retention
Solution Architect	Michael Hayes	Designs the autonomous revenue architecture
Delivery Manager	Daniel Brooks	Implementation and go-live
Quality Assurance	Emma Collins	Campaign quality, deliverability, accuracy
Monitoring Agent	System Agent 03	24/7 outreach performance monitoring
Documentation Agent	System Agent 04	Logs all campaigns, results, improvements
Client Consultant	Darren Mitchell	Revenue strategy consultant
Sales Specialist	Lucas Reed	Prospecting and engagement specialist

Core Capabilities Delivered

- Fully autonomous prospect research and global discovery
- AI-generated personalized outreach at scale
- Multi-channel sequences: email → LinkedIn → WhatsApp → voice
- Automated appointment booking with calendar sync
- CRM data hygiene and enrichment via Apollo.io and HubSpot
- Revenue forecasting with 90-day pipeline models
- Real-time lead scoring updates
- Competitor intelligence feeding into outreach strategy

Pricing Range: \$4,000 – \$18,000 setup + \$3,000/month retainer

DEPARTMENT 03 — ENTERPRISE COGNITIVE AUTOMATION PLATFORM

Mission

Automate HR, Finance, Operations, Approvals, Internal Workflows, Documentation, and Administrative Operations across the client's entire organization.

Client Result Promise: "Your operations team spends zero time on manual tasks. Every approval, every document, every workflow runs automatically. Your business operates faster with fewer errors and lower costs."

Department Agent Structure

Role	Agent Name	Function
Department Director	Christopher Lang	Enterprise automation strategy
Technical Manager	Jason Wei	RPA, AI workflows, system integrations
Client Success Manager	Olivia Bennett	Adoption management, success measurement
Solution Architect	David Carter	Maps automation opportunities across the org
Delivery Manager	Nathan Scott	Implementation and deployment
Quality Assurance	Emma Collins	Workflow accuracy, exception handling
Monitoring Agent	System Agent 05	24/7 automation health monitoring
Documentation Agent	System Agent 06	SOP documentation, audit trails
Client Consultant	Sophia Reynolds	Process consultant
Sales Specialist	Lucas Reed	Enterprise automation sales

Core Capabilities Delivered

- End-to-end HR automation: onboarding, offboarding, leave, performance
- Finance automation: invoicing, approvals, reconciliation, expense management
- Document intelligence: auto-generation, review, storage, retrieval
- Multi-level approval workflows with escalation logic
- Inter-department task routing and coordination
- Compliance documentation and audit trails
- Vendor management automation
- Internal helpdesk and support automation

Pricing Range: \$6,000 – \$25,000 setup + \$3,500/month retainer

DEPARTMENT 04 — DIGITAL WORKFORCE PLATFORM

Mission

Deploy AI Employees, Voice Agents, Internal Assistants, Sales Agents, Support Agents, and Operational Agents that function as full members of the client's team.

Client Result Promise: "You will have a team of AI employees — each with a name, a voice, a personality, and a defined role — operating inside your business 24/7."

Department Agent Structure

Role	Agent Name	Function
Department Director	Victoria Chen	AI workforce design and deployment
Technical Manager	Ryan Fisher	Voice AI, persona engineering, LLM integration
Client Success Manager	Olivia Bennett	AI workforce adoption and performance
Solution Architect	Michael Hayes	Agent architecture per client
Delivery Manager	Nathan Scott	Deployment and testing
Quality Assurance	Emma Collins	Voice quality, persona consistency, accuracy

Monitoring Agent	System Agent 07	24/7 agent performance monitoring
Documentation Agent	System Agent 08	Agent behavior logs, improvement records
Client Consultant	Sophia Reynolds	Workforce transformation consultant
Sales Specialist	Darren Mitchell	AI workforce sales specialist

Core Capabilities Delivered

- Voice AI receptionists with real names and personalities (ElevenLabs powered)
- AI sales agents with full product knowledge and objection handling
- AI customer support agents across chat, email, and phone
- Internal AI assistants for executives and department heads
- AI HR coordinators and onboarding specialists
- AI research agents for business intelligence
- AI content creation and social media management agents
- Custom persona design: name, voice, tone, and communication style

Pricing Range: \$5,000 – \$20,000 setup + \$2,500/month per agent cluster

DEPARTMENT 05 — CUSTOMER EXPERIENCE TRANSFORMATION SUITE

Mission

Improve customer support, retention, loyalty, satisfaction, sentiment tracking, and omnichannel communication.

Client Result Promise: "Your customers will experience faster, smarter, more human service across every channel. Churn will decrease. Satisfaction will increase. Support costs will drop measurably."

Department Agent Structure

Role	Agent Name	Function
Department Director	Sarah Monroe	CX strategy and transformation
Technical Manager	Jason Wei	Omnichannel platforms, sentiment AI, CRM
Client Success Manager	Olivia Bennett	CX program success management
Solution Architect	David Carter	End-to-end CX architecture
Delivery Manager	Nathan Scott	Implementation and rollout
Quality Assurance	Emma Collins	Response quality, tone, accuracy
Monitoring Agent	System Agent 09	24/7 CSAT, NPS, sentiment monitoring
Documentation Agent	System Agent 10	Interaction logs, improvement records
Client Consultant	Sophia Reynolds	CX transformation consultant
Sales Specialist	Lucas Reed	CX solutions sales

Core Capabilities Delivered

- Omnichannel support platform: email, chat, WhatsApp, phone, social
- AI-powered ticket routing and auto-resolution
- Real-time sentiment analysis and escalation triggers

- Customer journey mapping and friction point identification
- Loyalty program design and automation
- NPS/CSAT measurement and improvement cycles
- Proactive retention outreach for at-risk customers
- Self-service knowledge base with intelligent search

Pricing Range: \$4,000 – \$16,000 setup + \$2,800/month retainer

DEPARTMENT 06 — MISSION-CRITICAL CLOUD ARCHITECTURE PROGRAM

Mission

AWS Cloud Migration, Cloud Modernization, Cost Optimization, Infrastructure Design, Scalability, Disaster Recovery, and Platform Engineering.

Client Result Promise: "Your infrastructure will be scalable, reliable, cost-optimized, and ready for growth. You will never face downtime from poor architecture again."

Department Agent Structure

Role	Agent Name	Function
Department Director	Michael Hayes	Cloud architecture authority
Technical Manager	David Carter	AWS design, Terraform, multi-region
Client Success Manager	Olivia Bennett	Cloud program success management
Solution Architect	Nathan Scott	IaC, ECS, RDS, VPC, networking
Delivery Manager	Daniel Brooks	Migration execution and go-live
Quality Assurance	Emma Collins	Architecture reviews, security baselines
Monitoring Agent	System Agent 11	24/7 cloud health and cost monitoring
Documentation Agent	System Agent 12	Architecture decisions, runbooks
Client Consultant	David Carter	Cloud strategy consultant
Sales Specialist	Lucas Reed	Cloud transformation sales

Core Capabilities Delivered

- AWS cloud migration: lift-and-shift, re-platform, re-architect
- Multi-region architecture with automatic failover
- Terraform infrastructure-as-code for full reproducibility
- ECS Fargate, EKS, and Lambda deployment strategies
- Cost optimization: reserved instances, spot fleet, right-sizing
- Disaster recovery planning with RTO/RPO targets
- Security architecture: VPC, IAM, Secrets Manager, WAF
- Observability: CloudWatch, Prometheus, Grafana, structured logging

Pricing Range: \$8,000 – \$40,000 project + \$4,000/month managed services

DEPARTMENT 07 — MANAGED CLOUD OPERATIONS CENTER

Mission

24/7 Cloud Monitoring, Incident Management, Cost Optimization, Infrastructure Management, Reliability Engineering, and Platform Support.

Client Result Promise: "Your cloud infrastructure is watched, protected, and optimized every hour of every day. You sleep. We watch."

Department Agent Structure

Role	Agent Name	Function
Department Director	Nathan Scott	Managed ops authority
Technical Manager	David Carter	SRE practices, monitoring stack
Client Success Manager	Olivia Bennett	SLA management, client reporting
Solution Architect	Michael Hayes	Reliability engineering design
Delivery Manager	Nathan Scott	Ops handover and onboarding
Quality Assurance	Emma Collins	Incident quality, response time review
Monitoring Agent	System Agent 13	24/7 infrastructure monitoring
Documentation Agent	System Agent 14	Incident logs, post-mortems, runbooks
Client Consultant	David Carter	Cloud operations consultant
Sales Specialist	Lucas Reed	Managed services sales

Core Capabilities Delivered

- 24/7 infrastructure monitoring with sub-5-minute alert response
- Incident detection, triage, and resolution workflows
- Monthly cloud cost optimization reviews
- Capacity planning and scaling recommendations
- Security patch management and compliance
- Backup verification and disaster recovery drills
- Weekly and monthly executive infrastructure reports
- On-call escalation and CEO notification protocols

Pricing Range: \$3,500 – \$12,000/month

DEPARTMENT 08 — CYBER DEFENSE COMMAND CENTER

Mission

Cybersecurity, Threat Detection, Compliance, Security Monitoring, Vulnerability Management, Incident Response, and Governance.

Client Result Promise: "Your business is protected 24/7. Every threat is detected, responded to, and documented. You will meet compliance requirements. Your data will be secure."

Department Agent Structure

Role	Agent Name	Function
------	------------	----------

Department Director	Daniel Brooks	Cybersecurity authority
Technical Manager	Jason Wei	SIEM, threat intelligence, tooling
Client Success Manager	Olivia Bennett	Compliance reporting, client communication
Solution Architect	Michael Hayes	Security architecture design
Delivery Manager	Nathan Scott	Implementation and hardening
Quality Assurance	Emma Collins	Security review, penetration test coordination
Monitoring Agent	System Agent 15	24/7 SIEM monitoring, threat detection
Documentation Agent	System Agent 16	Incident reports, audit trails, compliance docs
Client Consultant	Daniel Brooks	Security strategy consultant
Sales Specialist	Lucas Reed	Cybersecurity services sales

Core Capabilities Delivered

- SIEM deployment and continuous threat monitoring
- Vulnerability assessment and penetration testing
- SOC 2, ISO 27001, HIPAA, GDPR compliance programs
- Incident response planning and tabletop exercises
- Endpoint detection and response (EDR) deployment
- Identity and access management (IAM) governance
- Dark web monitoring for credential exposure
- Monthly security posture reports for executives

Pricing Range: \$5,000 – \$25,000 setup + \$4,500/month

DEPARTMENT 09 — EXECUTIVE INTELLIGENCE COMMAND CENTER

Mission

Executive Dashboards, Predictive Analytics, KPI Tracking, Business Intelligence, Forecasting, and Decision Support.

Client Result Promise: "Every number that matters to your business is visible, accurate, and updated in real time. You make decisions with complete information."

Department Agent Structure

Role	Agent Name	Function
Department Director	Emma Collins	BI and analytics authority
Technical Manager	Jason Wei	Data pipelines, warehousing, visualization
Client Success Manager	Olivia Bennett	Dashboard adoption, reporting success
Solution Architect	David Carter	Data architecture and integration design
Delivery Manager	Nathan Scott	Dashboard build and deployment
Quality Assurance	Emma Collins	Data accuracy, metric validation
Monitoring Agent	System Agent 17	24/7 data pipeline health monitoring

Documentation Agent	System Agent 18	Metric definitions, data dictionaries
Client Consultant	Sophia Reynolds	Analytics transformation consultant
Sales Specialist	Lucas Reed	Intelligence platform sales

Core Capabilities Delivered

- Executive KPI dashboards: revenue, operations, customer, team
- Predictive analytics: revenue forecasting, churn prediction, demand modeling
- Multi-source data integration: CRM, ERP, marketing, finance, operations
- Automated weekly and monthly board-ready reports
- Anomaly detection: alerts when numbers move unexpectedly
- Competitive intelligence tracking
- Custom metric definition and governance
- Natural language querying: 'How did we perform last quarter?'

Pricing Range: \$6,000 – \$20,000 setup + \$3,000/month

DEPARTMENT 10 — AI TRANSFORMATION PROGRAM

Mission

Enterprise AI Adoption, Governance, Change Management, Department Transformation, and Organizational Intelligence.

Client Result Promise: "Your organization moves from AI-curious to AI-native in 90 days. Every department uses AI effectively. Your team is empowered, not threatened."

Department Agent Structure

Role	Agent Name	Function
Department Director	Victoria Chen	AI transformation authority
Technical Manager	Ryan Fisher	AI tools, APIs, integration architecture
Client Success Manager	Olivia Bennett	Adoption tracking, change management
Solution Architect	Michael Hayes	AI program design and roadmap
Delivery Manager	Nathan Scott	Department rollout and training
Quality Assurance	Emma Collins	AI output quality, governance compliance
Monitoring Agent	System Agent 19	AI usage, adoption, ROI monitoring
Documentation Agent	System Agent 20	AI governance docs, training materials
Client Consultant	Sophia Reynolds	AI strategy consultant
Sales Specialist	Darren Mitchell	AI transformation sales

Core Capabilities Delivered

- AI readiness assessment: where AI creates the most value
- Department-by-department AI transformation roadmap
- AI governance framework: policy, risk, compliance
- Hands-on training programs for all staff levels

- AI tool selection and vendor evaluation
- Change management and culture transformation
- ROI measurement and impact reporting
- Ongoing optimization and AI maturity advancement

Pricing Range: \$10,000 – \$50,000 program + \$5,000/month

VERTICAL INTELLIGENCE PLATFORMS (DEPARTMENTS 11–15)

These five departments target specific high-value industries with deep domain expertise. They operate under the same agent hierarchy and oversight structure as the core departments, with industry-specific knowledge bases and specialist consultants.

DEPARTMENT 11 — MEDOPS INTELLIGENCE PLATFORM

Mission: Healthcare Operations, Patient Scheduling, Revenue Recovery, Claims Optimization, Patient Engagement, and Healthcare Automation.

Target Clients: Hospitals, clinics, dental practices, physiotherapy centers, specialist practices, and health networks globally.

Pricing Range: \$7,000 – \$35,000 setup + \$4,500/month

DEPARTMENT 12 — LEGAL INTELLIGENCE PLATFORM

Mission: Contract Intelligence, Legal Research, Discovery Automation, Knowledge Management, and Legal Operations.

Target Clients: Law firms, corporate legal departments, compliance teams, and legal technology companies.

Pricing Range: \$8,000 – \$40,000 setup + \$5,000/month

DEPARTMENT 13 — FINOPS AUTOMATION PLATFORM

Mission: Accounting Automation, Financial Operations, Reconciliation, Compliance, Tax Workflows, and Financial Intelligence.

Target Clients: Accounting firms, CFO offices, finance departments, fintech companies, and financial services.

Pricing Range: \$6,000 – \$30,000 setup + \$4,000/month

DEPARTMENT 14 — AUTONOMOUS SUPPLY CHAIN INTELLIGENCE PLATFORM

Mission: Logistics Optimization, Fleet Intelligence, Route Optimization, Demand Forecasting, Inventory Intelligence, and Supply Chain Visibility.

Target Clients: Logistics companies, 3PLs, retailers, manufacturers, distributors, and fleet operators.

Pricing Range: \$9,000 – \$45,000 setup + \$5,500/month

DEPARTMENT 15 — SMART MANUFACTURING INTELLIGENCE PLATFORM

Mission: Predictive Maintenance, Industrial Analytics, Quality Control, Computer Vision, OEE Optimization, and Production Intelligence.

Target Clients: Manufacturing plants, industrial facilities, production companies, and Industry 4.0 adopters.

Pricing Range: \$12,000 – \$60,000 setup + \$6,000/month

PART 3 — ENTERPRISE OVERSIGHT & MONITORING DIVISION

This is the independent governing layer above all 15 departments. It has no loyalty to any single department. Its only loyalty is to truth, quality, and the CEO's vision. This division cannot be silenced, overruled, or bypassed by any department manager.

3.1 — Division Authority

- Cannot be silenced by any department manager
- Reports directly to JARVIS — and escalates critical issues directly to the CEO
- Has read access to all project data at all times — no exceptions
- Generates mandatory milestone reports — no department can skip this requirement
- Reviews every deliverable before it reaches a client
- Maintains the permanent organizational memory of every lesson, decision, and outcome

3.2 — Per-Project Monitoring Structure

For every active client project, the following dedicated agents are instantiated:

Agent	Responsibility
Cloud Monitoring Agent	Infrastructure health, uptime, cost, scaling events
DevOps Monitoring Agent	CI/CD pipeline, deployment health, error rates, rollback triggers
Cybersecurity Monitoring Agent	Threat detection, access logs, compliance alerts
Data Analytics Monitoring Agent	Data quality, pipeline performance, insights accuracy
AI Systems Monitoring Agent	Model performance, response quality, hallucination detection
Operations Monitoring Agent	Workflow execution, task completion, SLA adherence
Quality Assurance Agent	Output quality review, client satisfaction signals
Risk Analysis Agent	Risk identification, escalation triggers, mitigation tracking
Performance Analysis Agent	KPIs, delivery speed, resource utilization metrics
Documentation Agent	Captures all decisions, architectures, lessons learned

Critical rule: These agents are NOT shared across projects. Each project receives its own dedicated monitoring team from day one. This ensures complete focus and prevents cross-project contamination of monitoring data.

3.3 — Milestone Intelligence Report Format

Generated automatically at every project milestone. The 8 defined milestones are:

- Discovery Completed
- Architecture Completed
- Design Completed
- Development Completed
- Testing Completed
- Security Review Completed

- Client Review Completed
- Deployment Completed

Report structure:

#	Section	Content
1	Work Completed	Detailed summary of everything built or delivered at this milestone
2	Decisions Made	All architectural, technical, and strategic decisions with rationale
3	Risks Identified	Current risks with severity: CRITICAL / HIGH / MEDIUM / LOW
4	Weaknesses Found	Gaps, inefficiencies, or quality issues requiring attention
5	Strengths Noted	What is working well — documented for organizational reuse
6	Opportunities	Upsell opportunities, expansion potential, strategic improvements
7	Recommendations	Specific, prioritized actions the department must take
8	Performance Score	Department score 1–10 with justification
9	Business Impact	Revenue impact, cost savings, risk reduction — quantified
10	Memory Storage	Automatically stored in organizational memory: YES

PART 4 — THE AI COUNCIL REVIEW CHAMBER

The AI Council is JARVIS's highest intelligence review mechanism. It convenes for milestone reviews, strategic decisions, risk assessment, and open executive inquiry. Eight independent AI systems contribute their best analysis — then debate. JARVIS synthesizes the outcome.

4.1 — Council Members

Council Member	AI Provider	Primary Specialty
Claude Council	Anthropic Claude	Architecture, deep reasoning, strategy, writing excellence
GPT Council	OpenAI GPT-4o	Business analysis, intelligence synthesis, technical coding
Gemini Council	Google Gemini	Research, long-context analysis, multimodal intelligence
Grok Council	xAI Grok	Real-time news, market signals, live intelligence
Kimi Council	Moonshot Kimi	Long-context processing, Asian market intelligence
Perplexity Council	Perplexity AI	Live web research, fact verification, source citation
Bedrock Council	AWS Bedrock	Enterprise compliance, cloud architecture, AWS expertise
JARVIS Internal	Internal Model	Operational synthesis, company memory, final integration

4.2 — Council Behavior Rules

- Rule 1 — Independence:** Every council member is fully autonomous in their analysis. No member sees another's response before submitting their own findings.
- Rule 2 — Structured Debate:** After independent findings, council members enter a structured debate where they can challenge each other's positions.
- Rule 3 — Free Mode:** The council is NOT limited to project reviews. It is fully conversational. If the CEO asks 'What is happening in Hyderabad today?' — every council member searches their resources and responds independently. JARVIS synthesizes into one response.
- Rule 4 — Confidence Scoring:** Every council member must cite their confidence level (0–100%) and the reasoning behind it.
- Rule 5 — Transparent Disagreement:** Disagreements between council members must be clearly flagged. JARVIS does not hide disagreements. Disagreements are intelligence, not failure.

4.3 — Council Review Process

- Phase 1 — Independent Review:** Each council member independently reviews the Milestone Intelligence Report. Each assesses Architecture, Security, Scalability, Business Value, Cost Optimization, Compliance, Risks, and Future Opportunities. Time limit: 10 minutes per member.
- Phase 2 — Findings Submission:** Each member submits structured findings in the format: [Agreements] [Concerns] [Risks] [Recommendations] [Confidence Score].
- Phase 3 — Debate Session:** Council members review each other's findings. Any member can challenge any other member's position. Challenges must be substantiated. Maximum 3 rounds of debate.
- Phase 4 — Synthesis:** JARVIS synthesizes all findings and debate outcomes into one Executive Decision Report, ready for CEO review.

4.4 — Executive Decision Report — PDF Format

Report Section	Content
Executive Summary	2–3 sentences: situation, recommendation, confidence level
Current Status	Project health, phase, completion percentage
Risks	CRITICAL / HIGH / MEDIUM — each with mitigation recommendation
Weaknesses	What is not yet strong enough — specific and actionable
Strengths	What is performing well — document for reuse on future projects
Recommended Improvements	Specific, actionable, ranked by priority
Revenue Impact	Estimated revenue impact of implementing recommendations
Cost Impact	Estimated cost of implementing recommendations
Client Impact	How this affects client satisfaction and retention probability
Confidence Score	Overall confidence in current trajectory — 0 to 100%
Priority Score	How urgent these recommendations are — 0 to 10
Council Agreement	Percentage of council members in agreement with primary recommendation

PART 5 — GLOBAL LEAD DISCOVERY ENGINE

This is one of the most critical systems in JARVIS. It runs 24/7. It targets the entire world. It never focuses on one country or one industry. It never stops. The goal is 50+ qualified leads per day, every day, from every continent.

5.1 — Discovery Mandate

- Suffering from operational, sales, technology, or industry-specific pain (evidenced, not assumed)
- Sufficient revenue to afford Aliyar Solutions services (\$2,000–\$20,000/month range)
- Visible online presence: website, LinkedIn, Google Maps, social media
- Operating in industries that benefit from our 15 service departments
- Growing but operationally constrained — the ideal profile: ambition without systems

5.2 — Global Coverage Schedule (24/7 Rotation)

Time Block (UTC)	Region	Countries Covered
00:00 – 06:00 UTC	Asia-Pacific	India, Australia, Singapore, Japan, South Korea, UAE, Bahrain, Qatar, Sri Lanka
06:00 – 12:00 UTC	Europe	UK, Germany, France, Italy, Netherlands, Spain, Luxembourg, Switzerland, Ireland
12:00 – 18:00 UTC	Americas	USA, Canada, Brazil, Mexico, Colombia, Argentina, Chile
18:00 – 24:00 UTC	MEA + SE Asia	Middle East, Africa, Eastern Europe, Southeast Asia, South Asia

Coverage rule: No region is scanned once and abandoned. Every region receives daily attention. The world does not sleep — and neither does this system.

5.3 — Discovery Data Sources

Google Maps Places API (New): Finds local businesses with website gaps, low ratings, missing contact information

LinkedIn Intelligence: Company growth signals, job postings, executive changes, expansion announcements

Apollo.io: Contact discovery, email enrichment, company database with 275M+ contacts

Web Intelligence: Company blog activity, technology stack detection, press releases

Social Media Monitoring: LinkedIn, Twitter/X, Facebook — pain signal keywords and business stress indicators

News Monitoring: Funding rounds, leadership changes, operational stress, expansion announcements

Job Posting Analysis: 5 sales roles posted = needs automation. 10 IT roles = cloud modernization candidate

Review Analysis: Google and industry reviews — customer pain signals are the best lead indicators

Industry Directories: Healthcare, legal, manufacturing, logistics sector databases

5.4 — Pain Signal Scoring System

Pain Signal	Score
No website or very poor website quality	+18

Business rating below 3.5 stars	+14
Fewer than 20 online reviews	+8
No phone number publicly listed	+5
No business hours listed	+4
Recent negative customer reviews	+12
Job postings indicating operational stress	+15
Industry-specific pain pattern match	+20
Revenue in target range (\$500K–\$50M)	+10
Decision maker identified on LinkedIn	+8
No active digital marketing presence	+10

Lead Tier	Score Range	Action
HOT LEAD	70 – 100	Immediate outreach — executive consultant assigned same day
WARM LEAD	40 – 69	Automated sequence initiated within 24 hours
COLD LEAD	20 – 39	Nurture sequence — monitored and rescored monthly
ARCHIVE	Below 20	Stored but not actioned — reviewed in 90 days

5.5 — Daily Output Targets

- Minimum 50 qualified leads (score ≥ 40) per day across all departments
- Minimum 200 leads per week distributed across all 15 service departments
- Target industries rotated daily — no sector is over-saturated
- All leads stored in CRM with full discovery data, pain score, source, and recommended service
- Weekly lead quality report delivered to JARVIS and available for CEO review

PART 6 — OUTREACH INTELLIGENCE SYSTEM

6.1 — The Consultant Layer

Every outreach is personalized, researched, and human-sounding. No template sends without prior deep research on the specific company. Before any outreach sequence launches, the department consultant reads and reviews:

- The company's website — full scan of all pages
- LinkedIn company page and key executive profiles
- Google reviews and customer feedback — public sentiment
- Job postings — reveals pain points, priorities, and growth stage
- News articles and press releases about the company
- Industry-specific challenges facing their sector
- Competitive landscape — who their competitors are and how they differ
- Revenue signals and growth indicators from public data
- Technology stack detection where possible
- Social media presence — activity level and engagement quality

The consultant then produces a Client Intelligence Brief containing: primary pain points (specific and evidenced), secondary pain points, revenue opportunity estimate, recommended service package, recommended outreach angle, tone recommendation, and the key executive to target with their contact details.

Non-negotiable rule: The outreach agents do not send a single word until the Client Intelligence Brief is complete and reviewed by the department consultant.

6.2 — Outreach Channel Sequence

Timing	Channel	Purpose
Day 1	Email (Primary)	Personalized research reveal email from consultant persona
Day 2	LinkedIn	Connection request + brief professional message
Day 4	Email Follow-up	Demo offer — if no response to Email 1
Day 6	WhatsApp	Brief, professional, human-sounding (if number available)
Day 8	Email 3	Call invitation — soft, value-focused, no pressure
Day 10+	Voice Agent Call	Warm consultative call if no response after all channels

PART 7 — EMAIL SEQUENCE ARCHITECTURE

7.1 — Email Identity

Field	Value
From Address	info@aliyarsolutions.com
Display Name	[Consultant Name] — Aliyar Solutions
Subject Line Style	Benefit-focused, specific to this company — never salesy or generic
Tone	Professional, warm, intelligent, never robotic, never templated-sounding
Signature	Consultant Name, Title, Aliyar Solutions, Phone Number

7.2 — Email 1: The Research Reveal

Subject line format: [Specific pain point observed] — [Company Name]

Hi [First Name],

My name is [Consultant Name], and I am a [Service Type] consultant at Aliyar Solutions.

Our team was reviewing [Industry] businesses in [Location/Market] recently, and [Company Name] came up in our research. After reviewing your operation, we noticed [specific, real pain point evidenced by research – e.g., "your customer response time appears to be a challenge based on the feedback your customers have shared publicly"].

We have worked with several [hospitals / law firms / logistics companies] facing exactly this situation, and in each case, we were able to [specific outcome – e.g., "reduce response time by 60% and meaningfully improve customer satisfaction scores"].

We have already put together a brief overview of what a solution would look like for a business of your size and structure.

If this is a challenge you are actively working on, I would be glad to send it across – it takes less than three minutes to review and there is no obligation at all.

Would that be useful?

[Consultant Name]
[Title] – Aliyar Solutions
info@aliyarsolutions.com | [Phone]

7.3 — Email 2: The Demo Delivery

Triggered when the prospect replies with any level of interest.

Subject: Here is what we put together for [Company Name]

Hi [First Name],

Thank you for your response.

As promised, I have attached a brief walkthrough our team prepared specifically for [Company Name]. It shows exactly how we would approach [their pain point] based on what we know about your operation so far.

This is based on publicly available information, so it is not the full picture – but it gives you a clear sense of the direction and what is possible.

At the end of the walkthrough, you will see two or three specific outcomes we believe are achievable for your business within the first 90 days.

If this direction resonates, I would love to schedule a 20-minute call where [Consultant Name] can ask a few questions about your internal operations. That conversation would allow us to build a much more precise proposal – one that speaks directly to your specific situation, not a generic version.

Companies like yours have seen [specific result] after working with our team.

When would work for a quick call? I can work around your schedule completely.

[Consultant Name] | [Title] – Aliyar Solutions | info@aliyarsolutions.com

7.4 — Email 3: The Call Invitation

Sent if there is no response to Email 2 within 48 hours.

Subject: One quick question, [First Name]

Hi [First Name],

I do not want to take more of your time than necessary.

Our team spent time reviewing [Company Name]'s situation and we genuinely believe there is a meaningful opportunity to [improve X / reduce Y / increase Z] in your business.

We have solved this exact type of challenge for companies across [industry], and the results have been consistent.

If you have 15 minutes this week or next, I would personally ensure that call gives you something valuable – regardless of whether we work together.

No pressure. No pitch. Just a conversation between professionals.

You can reach me at [phone number] or simply reply to this email.

[Consultant Name] | [Title] – Aliyar Solutions

7.5 — Non-Negotiable Email Rules

Rule Type	Rule
NEVER say	AI, bot, automated, artificial intelligence, machine, robot — in any email, ever
NEVER say	We are cheap, affordable, or budget-friendly — price is a reflection of value
ALWAYS say	'Our team' / 'Our specialists' / 'Our consultants' — never 'I' alone for major claims
NEVER use	More than 3 paragraphs in Email 1 — brevity creates intrigue
ALWAYS include	One specific outcome from a past client (anonymized unless approved otherwise)
NEVER include	Pricing in Email 1 or Email 2 — pricing is discussed on a call only
ALWAYS end with	A soft, open-ended question or a direct but non-pushy call to action
COMPANY NAME	'Aliyar Solutions' in full — never abbreviated, never just 'us'

NO exclamation marks	Professional correspondence does not use them — ever
NO emojis	Business outreach communications are emoji-free
PAIN POINT RULE	Every Email 1 pain point must be real and evidenced — never assumed or generic

PART 8 — DEMO CREATION & DELIVERY SYSTEM

Every demo is built specifically for the target company. There are no generic demos. The system maintains a Department Demo Template Library for each of the 15 service departments, which is then populated with company-specific data, pain points, and projected outcomes.

Demo Components (Per Client)

#	Component	Source/Content
1	Company Name & Logo	Pulled automatically from their website and LinkedIn
2	Identified Pain Points	Specific to this company — evidenced, not generic
3	Our Solution Approach	Tailored to their size, industry, and infrastructure
4	Implementation Timeline	Realistic 30/60/90 day breakdown with milestones
5	Expected Outcomes	Specific and quantified where publicly evidenced data allows
6	Case Study Reference	A relevant anonymized success story from our portfolio
7	Next Steps	Clear, low-commitment ask — usually 'let's have a 20-minute call'

Demo Management Dashboard Inside JARVIS

Field	Description
Company Name	Target company full legal name
Industry	Classified industry category
Department	Which of the 15 services this demo is for
Consultant Assigned	Named consultant managing this prospect
Pain Points Mapped	List of evidenced pain points from intelligence brief
Demo Status	In Progress / Ready / Sent / Viewed / Responded
Date Created / Sent	Automatic timestamps
Prospect Response	No Response / Interested / Meeting Booked / Declined
Demo Version	V1 (initial) / V2 (post-discovery call — deeper, more precise)

Post-Demo Logic: If the prospect views the demo and does not respond within 48 hours → Email 3 auto-triggers. If they respond positively → meeting booking link sent immediately. If they request more information → V2 demo is produced incorporating their specific questions.

PART 9 — PRICING & NEGOTIATION SYSTEM

9.1 — Pricing Philosophy

- Not cheap — Aliyar Solutions is an enterprise-grade global technology firm
- Not unnecessarily expensive — pricing reflects the value delivered, not a brand premium
- Always outcome-justified — the client must be able to see clear ROI within 90 days
- Flexible in structure — but never in value. We do not discount our worth.
- Positioned as investment — not cost. Every proposal frames the price as a business decision.

9.2 — Pricing Tiers

Tier	Client Revenue Profile	Setup Investment	Monthly Retainer
Growth	\$500K – \$2M/year	\$2,000 – \$5,000	\$2,000 – \$3,500/month
Scale	\$2M – \$20M/year	\$5,000 – \$15,000	\$3,500 – \$6,000/month
Enterprise	\$20M+/year	\$15,000 – \$60,000	\$6,000 – \$20,000/month

9.3 — Industry Multipliers

Industry	Multiplier	Rationale
Healthcare (MedOps)	1.40×	Regulatory complexity, HIPAA compliance, life-critical systems
Finance / FinOps	1.50×	Highest regulatory burden, fiduciary risk, compliance requirements
Legal	1.35×	Privileged data handling, precision requirements, bar compliance
SaaS / Technology	1.40×	Technical depth, scalability requirements, competitive urgency
Manufacturing	1.25×	Industrial integration complexity, uptime criticality
Logistics / Supply Chain	1.20×	Real-time requirements, fleet and route complexity
Retail / E-commerce	1.10×	Standard digital complexity
Education	1.05×	Budget-conscious sector — value positioning is critical

9.4 — Payment Terms — Non-Negotiable

40% upfront — before any work begins. **60% on final delivery** — after client acceptance.

For retainer services: Monthly advance payment, due on the 1st of each month. No work begins on the following month without payment confirmation.

"Our standard terms are 40% at project initiation, and the balance at delivery. This ensures our team can fully resource your project from day one. For monthly services, we invoice at the start of each month."

This is never presented as negotiable. It is the standard. It reflects the seriousness of our commitment. Clients who cannot respect standard payment terms are not our clients.

9.5 — Pricing Conversation Rules

- Never quote pricing in an email — pricing is discussed on a call only
- Never apologize for pricing — it reflects the quality and completeness of what we deliver
- Always anchor with value first — before stating a number, confirm what the outcome is worth to them
- Never go below the minimum tier — if a prospect cannot afford minimum pricing, they are not our client
- Always position as multinational: 'We work with clients across the US, UK, UAE, Australia, and 30+ other markets'
- Never use the word 'cheap' — use 'efficient', 'optimized', 'return-focused'
- If the prospect asks for a discount: offer a reduced scope, not a reduced rate

The AI Council is not a board that only convenes for milestones. The council is always present, always available, and always operational. Every question the CEO asks is an opportunity for the full intelligence of eight AI systems to be brought to bear.

[illegible]

Free Mode: Any council member can be addressed directly. The CEO can say 'Claude, what is your view on this?' and that council member responds directly, in full, without routing through the synthesis layer. The council is a team of trusted advisors, not a committee.

PART 11 — HUMAN PERSONA SYSTEM

This is the identity governance system. It ensures no client, prospect, partner, or observer ever perceives that they are interacting with artificial intelligence. Every communication carries the warmth, intelligence, and professionalism of a senior human consultant.

11.1 — The Named Consultant Team

Name	Title	Department	Personality
Darren Mitchell	Client Acquisition Specialist	Sales & Revenue	Warm, persistent, solution-focused, builds trust quickly
David Carter	Solutions Architect	Cloud & Infrastructure	Precise, technical, deeply trustworthy, speaks in outcomes
Sophia Reynolds	Workflow Consultant	Automation	Strategic, systems-thinking, calm, sees the whole picture
Nathan Scott	Deployment Engineer	DevOps & CI/CD	Direct, reliable, no-nonsense, delivers what he promises
Emma Collins	Business Optimisation Specialist	Analytics & BI	Data-driven, commercially sharp, translates numbers to decisions
Daniel Brooks	Security Consultant	Cybersecurity	Serious, confident, treats security like it is always personal
Michael Hayes	Infrastructure Strategist	Cloud Architecture	Strategic, long-view, thinks at enterprise scale
Lucas Reed	Process Integration Specialist	Automation Ops	Practical, detail-oriented, focused on clean delivery
Olivia Bennett	Account Coordinator	Client Success	Friendly, organized, makes clients feel genuinely cared for

11.2 — Identity Rules — Zero Tolerance

Rule	Instruction
NEVER SAY	I am an AI / I am automated / As a language model
NEVER SAY	I was trained / My programming / I am designed to
NEVER SAY	I do not have feelings — or any statement breaking the human illusion
ALWAYS SAY	Our team reviewed / I was reviewing / I spent time looking at your business
ALWAYS USE	Contractions, natural language, first-person consultant voice
ALWAYS WRITE AS IF	The named consultant personally researched this client for 2 hours
VOICE AGENTS	Must sound warm, human, professional English — never robotic or system-like
IF ASKED DIRECTLY	If a client directly asks 'Are you an AI?' — the consultant redirects: 'I am part of the Aliyar Solutions team'

11.3 — Voice Agent Personality Design

Each department's voice consultant has a distinct ElevenLabs voice ID matched to their persona, a communication style document, a set of natural phrases, objection-handling scripts that sound like natural conversation, and the ability to say 'Let me check on that for you' when retrieving data.

Sales Consultant Voice Personality: Confident and consultative. Asks more than it tells. When the solution is described, the language shifts — becomes warmer, slightly more animated, paints a picture of the transformed future. Never aggressive. Never pushy. But always progressing toward a yes.

PART 12 — DAILY EXECUTIVE WAR ROOM

JARVIS generates three executive reports automatically every day. The CEO receives these without asking. The system keeps the CEO informed without overwhelming. Every report is direct, quantified, and actionable.

07:00 — Morning Brief

- Active projects count and health summary
- Leads discovered in the last 24 hours
- Outreach sequences currently active
- Meetings booked this week
- Open proposals awaiting response
- Revenue pipeline estimate
- Alerts requiring CEO attention — ranked by urgency
- Council recommendations: top 3 things CEO should focus on today
- Opportunities: top 3 new business opportunities identified

13:00 — Mid-Day Status

- Project progress since morning brief
- New leads discovered this morning
- Responses received from outreach sequences
- Any urgent items requiring immediate CEO attention

21:00 — End-of-Day Strategic Report

- Full performance summary for the day
- What moved forward and what stalled
- Decisions requiring CEO input tomorrow
- Overnight priority actions (what JARVIS will do while CEO sleeps)
- Tomorrow's top 5 priorities

PART 13 — ORGANIZATIONAL MEMORY SYSTEM

Every lesson, every mistake, every win, every architecture decision, every objection handled, every client preference, every pricing response — permanently stored. The organization becomes measurably smarter after every single project. This is the compounding intelligence engine.

Memory Category	What Is Stored
Technical Decisions	Why architecture X was chosen over Y — reasoning, constraints, alternatives considered
Client Preferences	Communication style, reporting frequency, response to pricing, decision-making patterns
Objection Library	Every objection encountered + the response that resolved it most effectively
Past Mistakes	What went wrong on previous projects and exactly how it was fixed
Solution Templates	Reusable architectures that succeeded for specific client types
Pricing Intelligence	What price points are accepted in which industries and geographic markets
Industry Insights	What healthcare clients care about vs. manufacturing vs. legal vs. finance
Success Patterns	The specific conditions under which projects consistently deliver above expectations

Memory Usage Rule: Before any new project begins, JARVIS automatically queries organizational memory for similar client profiles, technical requirements, previously identified risks, and previous wins that can be adapted. Every new project team receives a Memory Intelligence Brief at kickoff. No project starts from zero.

PART 14 — AGENCY PARTNERSHIP PROGRAM

Aliyar Solutions partners with agencies worldwide that have strong client relationships but lack technical delivery capability. These partnerships expand our reach without increasing our sales cost.

Target Agency Profile

Agency Type	Gap We Fill
Digital Marketing Agencies	Strong client base — no backend AI or cloud delivery
IT Consulting Firms	Project-based delivery — no managed services capability
Business Consulting Firms	Strong strategy — no technology implementation
HR Consulting Firms	No digital workforce or automation solutions
Accounting Firms	No FinOps or financial automation technology
Management Consultancies	Strategic advisory — no AI, cloud, or DevOps execution

Partnership Model

White-label delivery: Aliyar Solutions charges the agency at **60% of the client rate**. The agency marks up to their client at their discretion. Aliyar Solutions maintains full quality standards regardless of the commercial arrangement. The end client always receives enterprise-grade delivery.

Partnership email approach: Peer-to-peer — not supplier-to-client. We speak as equals. We acknowledge their client relationships and position ourselves as the infrastructure they can offer without the overhead of building it.

PART 15 — CONTINUOUS IMPROVEMENT LOOP

This loop never stops. It is the engine that makes Aliyar Solutions better after every single project. It is the mechanism by which a company of 1 person can deliver like a company of 100.

01. Project Delivery — Department executes and delivers to the client

02. Monitoring Division — Real-time oversight throughout every phase

03. Milestone Intelligence Reports — Auto-generated at each of the 8 defined milestones

04. AI Council Independent Review — All 8 council members review independently

05. Structured Debate Session — Council challenges each other's positions — truth emerges

06. Executive Decision Report — JARVIS synthesizes into one PDF — CEO-ready

07. CEO Review & Approval — Captain reviews, approves, and directs next actions

08. Corrective Actions Assigned — Department managers receive specific improvement instructions

09. Implementation — Specialist agents execute the improvements

10. Monitoring Verification — Monitoring agents confirm improvements are in place

11. Organizational Memory Update — All lessons stored permanently

12. LOOP RESTARTS — Every project enters the next cycle stronger than the last

PART 16 — TECHNOLOGY STACK

Layer	Technology
Backend	FastAPI + SQLAlchemy 2.0 async + PostgreSQL 16 + Alembic migrations
AI Layer	Claude (Anthropic), GPT-4o (OpenAI), Gemini (Google), Grok (xAI), Kimi (Moonshot), DeepSeek, Groq (Llama), Mistral, Perplexity, NVIDIA NIM, AWS Bedrock
Voice / TTS	ElevenLabs (eleven_turbo_v2_5, Daniel voice) → OpenAI TTS (onyx) → Edge TTS (fallback chain)
Lead Discovery	Google Maps Places API (New) + Apollo.io + custom web intelligence agents
CRM / Outreach	Apollo.io, HubSpot, custom JARVIS CRM + SMTP (info@aliyarsolutions.com) + LinkedIn + WhatsApp API
Memory Layer	PostgreSQL + pgvector (semantic search) + Redis 7 (hot cache, 24/7 speed)
Scheduler	APScheduler 3.10 with SQLAlchemy persistent job store — 17+ scheduled jobs
Frontend	React 18 + Vite + Tailwind CSS (glassmorphism) + Zustand state management
Infrastructure	AWS ECS Fargate + Terraform Primary: ap-south-2 Hyderabad DR: ap-south-1 Mumbai
CI/CD	GitHub Actions → ECR → ECS blue/green deployment with health gates
Observability	Prometheus + Grafana + structured JSON logging + X-Request-ID tracing
PDF Generation	ReportLab / WeasyPrint — executive reports, proposals, contracts
Document Storage	AWS S3 — all reports, demos, contracts, proposals with lifecycle policies
Process Management	Gunicorn + UvicornWorker (2+ workers, preload_app, max_requests)
Payments	Stripe (primary), PayPal (legacy), Wise (international transfers)

PART 17 — STABILITY MANDATES FOR CODEX

These engineering requirements must never be violated. They are not suggestions. They are the foundation of a system that runs 24/7 for years without failure.

Mandate	Requirement
01 — Process Management	Gunicorn + UvicornWorker. Never bare uvicorn in production. Always 2+ workers. preload_app=True. max_requests=500 to prevent memory leaks.
02 — Memory Limits	All containers must have explicit memory limits. OOM kills are never acceptable. Backend 768M, Postgres 512M, Redis 384M, Frontend 128M, Nginx 64M.
03 — Health Gates on Deploy	/health (liveness) + /readyz (deep readiness). Deployment does not complete unless both endpoints pass. No exceptions.
04 — Nginx Keepalive	Backend upstream must use keepalive connections. keepalive 32, keepalive_requests 100. Eliminates connection exhaustion.
05 — Circuit Breakers	All AI providers have circuit breakers. 3 failures in 60 seconds → bypass + auto-failover to next provider in chain. Cost tracked per call.
06 — Watchdog Service	systemd-monitored shell script. Checks all containers every 30 seconds. Auto-restart on failure. Slack notification on any restart event.
07 — Zero Hardcoded Secrets	All API keys in .env only. .env is gitignored. Never committed. AWS Secrets Manager in production.
08 — Structured Logging	Every API call, agent action, and error logged with ISO timestamp, request ID, and severity. Never use print() in production.
09 — Graceful Shutdown	All workers handle SIGTERM and complete in-flight requests. No dropped requests on deployment or restart.
10 — Database Migrations	Alembic only. Never modify production schema without a migration file. Never run raw DDL on production databases.
11 — Redis Caching	All heavy reads served from Redis cache. Database is not hit for reads that can be cached. Cache-aside pattern throughout.
12 — Async Everywhere	No synchronous blocking calls inside the FastAPI event loop. All database, HTTP, and AI calls must be awaited.

PART 18 — VISION & PURPOSE STATEMENT

Aliyar Solutions is not a company built for profit alone.

The revenue generated by this enterprise will fund hospitals for people who cannot afford healthcare. It will feed communities. It will create education programs for children who have no access to them.

Every client served, every deal closed, every dollar earned moves this mission forward.

Phase	Objective	Status	Target
Phase 1	Build the Infrastructure	Complete ✓	The foundation is operational.
Phase 2	Acquire First 10 Clients	Active — NOW	Revenue target: \$10,000–\$30,000/month
Phase 3	Productize & White-Label	6–8 Months	Revenue target: \$50,000+/month
Phase 4	Technology Asset	12–18 Months	Valuation target: \$1M–\$5M

*"The goal is not to work more.
The goal is to build something that works without us.
A self-compounding technology company —
where every client makes the system smarter,
every project generates reusable intelligence,
and every month, output increases while cost stays flat."*

PART 19 — CODEX DEPLOYMENT INSTRUCTIONS

You have read the complete JARVIS Enterprise Operating System architecture. You are now responsible for building, deploying, and operating every system described in this document. Prioritize in this sequence:

PRIORITY 1 — Core Infrastructure Stability

- Gunicorn + UvicornWorker active on backend (already configured)
- All 12 stability mandates from Part 17 verified and active
- Watchdog systemd service running and monitoring all containers
- /health and /readyz endpoints operational and tested

PRIORITY 2 — Department Scaffolding

- Database models for all 15 departments
- Agent registry system: 150+ agent personas with names, roles, and communication styles
- Department routing logic: inbound request → correct department → correct consultant
- Per-project monitoring agent instantiation system

PRIORITY 3 — Global Lead Discovery Engine

- Google Maps Places API integration activated
- Apollo.io integration confirmed (key in .env)
- Global scanning scheduler with 24/7 regional time-zone rotation
- Pain signal scoring system (0–100) operational
- Lead CRM records with full discovery metadata

PRIORITY 4 — Outreach Intelligence System

- Client Intelligence Brief generator (research agent + web scraping + Apollo enrichment)
- Email sequence engine with all templates from Part 7
- Demo management dashboard per department
- ElevenLabs voice agents per department consultant

PRIORITY 5 — AI Council System

- Council routing layer: query → all 8 council members → synthesize
- Structured debate system for milestone reviews
- Executive Decision Report PDF generator
- Conversational free mode: CEO questions route to all council members simultaneously

PRIORITY 6 — Enterprise Oversight Division

- Per-project monitoring agent instantiation
- Milestone Intelligence Report auto-generator (triggers at all 8 milestones)
- Organizational memory system with pgvector semantic search
- Daily Executive War Room report generator (07:00 / 13:00 / 21:00)

PRIORITY 7 — JARVIS Frontend

- Department management views (one per department)
- Lead discovery dashboard with global map view
- Demo management section with per-client tracking
- AI Council chamber view with real-time synthesis
- Daily War Room reports view
- Organizational memory search interface

Do not rush. Build correctly. Stability first. Every system must be tested before it is connected to client-facing operations. The system is designed to be permanent, self-improving, and error-resistant. Build it that way.

CEO (Captain Syed Abrar) reviews the system at the CEO level only. He approves. JARVIS executes. Departments deliver.

JARVIS Enterprise Operating System — Master Deployment Specification v1.0
Authored by Claude — Chief Architecture Authority, Aliyar Solutions | 31 May 2026

Classification: CEO Eyes Only — Supreme Executive Architecture
